

AGNIV KASHYAP

Product Leader | AI-Driven Consumer Platforms | Fintech & Marketplaces | 0-to-1 and Scale

Delhi, India • +91 91130 49917 • connect.agnivkashyap@gmail.com • [LinkedIn](#) • [Portfolio](#)

SUMMARY

Product leader with 7+ years across consumer fintech, e-commerce, and AI-driven platforms, most recently leading product for Cars24 (43M-MAU platform spanning CarInfo, VehicleInfo, Cars24). I ship 0-to-1 products under ambiguity, build and lead PM teams, and operate close to the metric: high-reliability payments and credit at Jupiter, ₹300 Cr+ rural commerce P&L at Rozana, and platform-led U2L and stickiness gains at Cars24. Comfortable building with AI; have replaced vendor tooling with in-house, AI-built systems and shipped behavioral lead-scoring and prediction layers used by Marketing and Growth.

EXPERIENCE

AVP, Product | Cars24 / CarInfo

Oct 2025 – Present

Reporting to CEO • Hybrid IC + people manager • Owns U2L and DAU/MAU mandate across CarInfo, VehicleInfo, Cars24 (43M MAU combined) • Team: 4 PMs, 4 engineers, 1 data analyst

- **Launched Garage**, a personalized vehicle-management surface inside CarInfo. Drove ~20K cars added in the first two months and ramped the feature to ~₹5 Cr/month gross sales run-rate, opening a new revenue line for the platform.
- **Lifted Created-to-Pay funnel from 20% to 35% in one quarter** through three coordinated bets: a dynamic, intent-aware bottom sheet; a personalization screen tied to vehicle and source signals; and a Lead Management module that sequences nudges by predicted purchase intent.
- **Grew Service History gross sales by 25%** and net profit by 20% in a single quarter (net sales steady at ~₹30 lakh/month) by re-pricing low-margin SKUs, tightening the booking funnel, and reducing vendor-side leakage.
- **Replaced third-party CRM with an in-house, AI-built CRM**. Scoped, prototyped, and shipped with a 2-person team in an internal AI hackathon. Now serves the 10-person operations org, eliminating recurring license spend and unlocking custom workflows the vendor could not support.
- **Built a behavioral Lead Scoring layer** that buckets users by purchase-likelihood using install source, GA event patterns, in-app engagement, exit behavior, vehicle search intent, and demographics. Marketing now targets high-quality buckets first, driving a 25% lift in User-to-Lead conversion.
- **Built a user prediction layer** forecasting next-action sequence, churn probability, and intent. Output powers Growth cohorts and lifecycle marketing, contributing to higher product adoption and a ~20% lift in average sessions per user.
- **Migrated all consumer surfaces behind a BFF + CMS config layer**. Every screen, banner, and CTA is now non-engineering controllable, collapsing time-to-experiment from weeks to hours.
- **Shipped a Claude-based automated product-testing plugin (beta)** that runs end-to-end regression on user-facing flows, reducing manual QA effort on every release.
- **Stickiness focus**: DAU/MAU at 7%, typical for an RC-search-led acquisition pattern. Garage, lead-scoring, and prediction layers are the deliberate plays to convert one-time RC searchers into recurring users; the explicit metric I am hired against.

Assistant Vice President, Product & Technology | Rozana.in

Jul 2024 – Sep 2025

P&L owner for rural commerce platform • 10+ PM org • ₹300 Cr+ portfolio

- **Owned a ₹300 Cr+ rural commerce P&L**, set multi-year product vision, instituted OKRs across a 10+ PM org, and delivered 30% YoY growth on the portfolio.
- **Rebuilt product discovery** for low-literacy, low-bandwidth users using semantic search and a RAG retrieval layer tuned to Indian-language queries and local buying patterns, lifting CTR by 18%.
- **Shipped a contextual recommendation engine** (seasonality, region, connectivity-aware) that reduced catalog drop-offs in low-connectivity geographies and improved repeat engagement.
- **Deployed an AI-driven helpdesk** with semantic chunking and contextual retrieval. Resolved ~35% of queries instantly and cut average resolution time by 28%.

- Built hub-level demand forecasting that improved inventory accuracy by ~40% and held 95%+ fill rates in remote villages, directly de-risking the rural distribution model.

Product Manager | Jupiter Money

Jun 2022 – Jun 2024

Owned credit & payments stack covering onboarding, card issuance, authorization, settlements, and fraud

- **Rebuilt onboarding from a 25-minute, 5%-converting funnel into a sub-10-minute flow converting at 9%** by re-sequencing steps and integrating PAN, Aadhaar, and bureau APIs to remove manual entry. Nearly doubled top-of-funnel conversion and contributed to 3x active users YoY.
- **Defined requirements for a high-reliability payments stack with NPCI, Visa, and Mastercard, including ISO 8583 dual and single-message flows with intelligent routing. Lifted authorization success rates by ~8%** with zero regulatory escalations across the period.
- Embedded RBI KYC/AML rules, velocity checks, and dispute workflows into the live transaction path. Kept the stack compliant through multiple audit cycles while scaling volume.
- **Launched a multi-benefit credit card.** Designed the rewards architecture and spend-analytics surface that drove 3x YoY growth in active card usage.
- Killed a near-shipped feature 48 hours before launch after surfacing an RBI-guideline conflict missed earlier in scoping. Painful, but the right call, and now a checklist item in every fintech feature I scope.

Product Manager | Urbanic

Jan 2022 – Jun 2022

- Redesigned the consumer app based on India + Europe research; partnered with engineering to scale catalog and checkout APIs on AWS for the India launch. Contributed to a 30% lift in app installs over the launch period.
- Benchmarked quick-fashion competitors and helped launch new product lines that opened ~20% incremental sales in the India market entry.

Associate Product Manager | Flipkart

May 2019 – Jan 2022

Fraud & risk management; protected millions of daily transactions on India's largest e-commerce platform

- Owned the FRM product roadmap, combining rule engine, ML-based risk scoring, and third-party intelligence APIs to identify fraud patterns in transaction data. Materially reduced fraud incidents on the platform.
- Built scalable seller verification and risk-scoring workflows that improved authenticity detection (~15%) and supported regulatory compliance.
- Worked directly on data-driven pattern discovery, translating analyst findings into shippable rules and feature requests for the ML team.

Product Analyst (Intern) | Myntra

Dec 2018 – May 2019

- Audited AI-generated customer-support transcripts at 90%+ accuracy, feeding labeled data back into model training. Also contributed front-end fixes and usability analysis on the consumer app.

SKILLS

Product Leadership: Vision & strategy, OKR design, PM hiring & mentoring, executive stakeholder management, P&L ownership

Domains: Consumer fintech (cards, credit, payments), marketplaces, growth, rural commerce, AI/ML platforms

AI & Data: Building with LLMs (RAG, semantic search, agentic workflows), behavioral scoring, predictive cohorting, A/B experimentation, SQL, Python (analysis)

Payments & Compliance: NPCI / Visa / Mastercard integrations, ISO 8583 flows, RBI KYC / AML, dispute workflows

Tools: Mixpanel, Amplitude, GA4, Figma, Jira, Linear, Claude (build + automate), Notion, SQL

EDUCATION

BS, Data Science & Applications — Indian Institute of Technology, Madras

In Progress

Higher Secondary (Class XII), AHSEC, Assam

2013

CERTIFICATIONS

Six Sigma Black Belt (Regression & Forecasting) • Time Series Analysis with Python • Google Advanced Analytics
